GEOGRAPHIC BUSINESS SOLUTIONS
Applying geospatial solutions to your business

Engage your users with Web Mapping

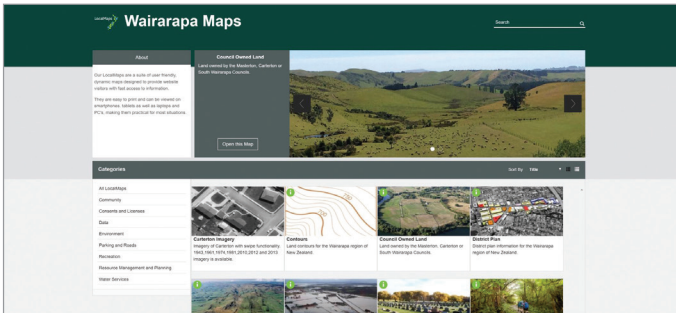

Talk to GBS about getting the most out of these 3 great opportunities for a world class web mapping solution.

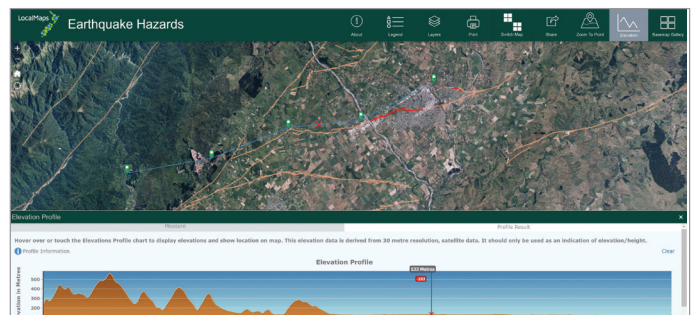

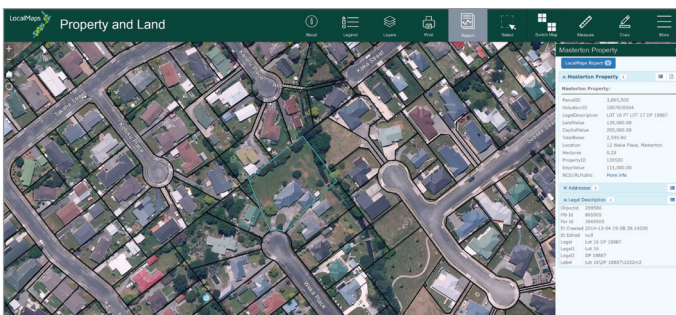

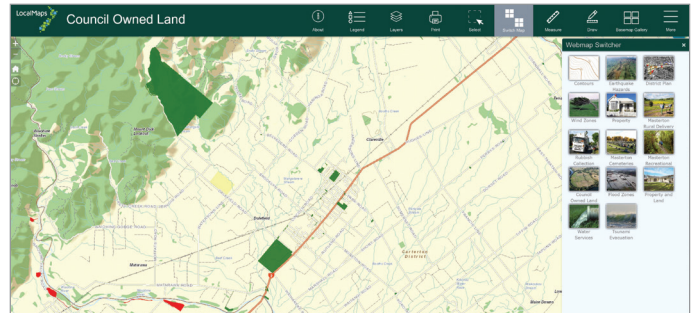

Separately or all together! ArcGIS Online or Portal for ArcGIS

LocalMaps is a highly configurable, Local Government focused web-mapping application provided by Eagle Technology which forms a key part of the ArcGIS for Local Government solution. It is designed to be intuitive and powerful for end users while having simple deployment and maintenance. Designed specifically to meet the needs of New Zealand Local Government, LocalMaps is the next generation of Web Mapping applications and features the following key benefits:

Internal or Public	Can be configured for either internal or public use including the ability to control security at different levels
Flexible deployment	LocalMaps can be deployed on premise, in cloud (public/private) or hybrid environments
Enterprise Integration	Capabilities Connect your web mapping with associated information from other enterprise systems
Accessible on all devices	Being specifically designed to be responsive to different platforms LocalMaps can be accessed on any iOS, Android or Windows smart device (tablet, mobile), desktop or web browser
Powered by WebApp Builder for ArcGIS	Based upon Esri's powerful WebApp Builder for ArcGIS technology, LocalMaps allows you to easily deploy web mapping for any user, with the right data, tools and user experience to fit your needs
Fully configurable	Through the use of web-based administration tools it is designed to provide flexibility - eliminating the need for coding
Extensible	Additional capabilities can be easily added through the use of self-contained UI "widgets"
No Cost Implementation and Support	Full implementation, configuration and support will be provided at no additional cost to Esri LG clients

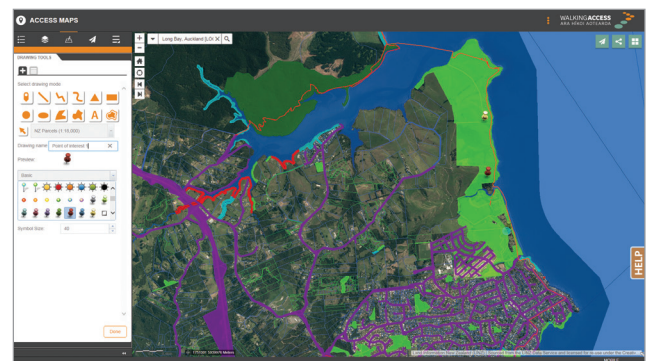

Wairarapa Local Maps

GBS has the knowledge and experience to craft a great solution to meet your needs.

Extend Local Maps with **GISCO** and **GBS widgets**. A range of highly functional widgets and most are freely available under creative commons to anyone (conditions apply!). Example widgets are:
