

A ready-to-use extensible web-based GIS Solution. With rich design and themes, pre-configured processes and workflows, Waahi is an intuitive platform for accessing and visualising data, and sharing geospatial information.

Gallery

Viewer

Ready to go

-  Curated and relevant workflows for your users.
-  Extends Esri's Web AppBuilder (WAB) and can be used alongside any other WAB widgets.
-  Ability to extend solution with configuration and customisation.
-  Integrates with other enterprise applications, and systems, such as Geocortex, Automated Reporting Tool (ART) and Isolink.
-  Deployable anywhere your ArcGIS Online is; On-Premise or in the Cloud.
-  A suite of ready-to-use apps as well as tools to build your own.
-  Bi-annual product enhancement releases.
-  Technical support throughout implementation and configuration phase. We can also manage the implementation for you.
-  Training, knowledge-transfer and consulting.

WAAHI

The Waahi Solution

Used by councils and utility companies across New Zealand and internationally, the Waahi solution offers the following:

-  A Viewer utilising the Esri Web AppBuilder framework.
 - Custom Waahi WAB theme with layout, branding and display settings easily customisable to suit your organisation's preference.
 - Both custom Waahi widgets and Esri commercial-off-the-shelf (COTS) widgets. Web AppBuilder Administrators can manage and configure each widget in the widget admin, for example defining links to organisation data, configuring how data is displayed to the user after a feature query or giving the user more or less flexibility when they are interacting with the widget in the Viewer.
 - The custom widgets add and enhance functionality and capability. As an example, the custom Interrogate Framework includes the Search, Identify, and Select widgets with results displayed in a custom Results widget. Attribute display is highly customisable and nested relationships can be modelled.

Parcel Relationships in the Results Widget

-  A customised Gallery application provides a simple and easy-to-use home site for your users to easily find and access applications.
-  The Gallery, Viewer and widgets are fully integrated with ArcGIS Online and Portal for ArcGIS, including for identity management.
-  Supported across desktop, mobile and tablet.

Key Widgets
